Abstract

Ideology of Sustainable Development and Sustainable Development Goals influence the transformation of business processes in the companies. Professional accountants are important part of this transformation. In this paper the role of accounting in Sustainable Development Goals achievement is discussed. Different approaches to structuring the role of professional accountants in Sustainable Development are investigated. Among them are types of roles that perform accountants, their professional functions, skills and competencies in the corporate environment. As the result a holistic vision of the role of accounting in sustainable development in the new economic conditions is provided.

INTRODUCTION

United Nation’s (UN) Sustainable Development Goals (SDGs) nowadays are generally recognized guidelines of the Global Development until 2030. They were adopted at the UN summit in New York in 2015. There are 17 goals which are specified in 169 varied indicators. SDGs call governments, business and public from all the countries to intensify efforts to resist climate changes, poverty, inequality, environmental pollution and other challenges of our time.

Unlike the Millennium Development Goals the SDGs are aimed for more active involvement of the business community, its innovation and investment potential to overcome these challenges by including them into business priorities. In particular, achievement of the SDGs requires the formation of a pool of resources, comparable with 1.5 – 4% of global GDP. It emphasizes the need to attract business to government initiatives on sustainable development.

Herewith, business leaders consider the SDGs as new opportunities for the development of their activities: 89% of CEO noticed that commitments to sustainable development have a real impact on their industry (United Nations, 2016) and 71% of businesses already plan to take the SDGs into account in their activity (PwC, 2015).

17 SDGs and 169 indicators form a continuous basis for companies to create, enhance, inform and report on their strategies, objectives and
activities. This will improve communication with key stakeholders, increase their loyalty and transparency of the business environment and quality management as a framework for corporate sustainability in terms of growth of legal, reputational risk, volatility of financial markets and access to finance (UN Resolution, 2015).

The importance of high-quality corporate reporting in ensuring financial stability and sustainable development in general and in particular the achievement of the SDGs was officially recognized during 32-nd session of UNCTAD’s Intergovernmental Working Group of Experts on International Standards of Accounting and Reporting (ISAR).

Accountants are highly involved in this process. They measure, evaluate and disclosure the progress in SDGs achieving by the company. Accountants act as guides and translators of the Triple Bottom Line ideas using the language of corporate sustainability.

Bakker (2012) from the World Business Forum for Sustainable Development notes that “accountants are going to save the world”. Accountants minimize information asymmetry and assess investment risks, they create integrated reporting and integrated audit, provide and test standards of sustainability accounting, reporting and auditing within the new business model. With specific professional skills and involvement in governance, risk management, business analysis, decision support, due diligence, anti-corruption activities and ensure corporate transparency, professional accountants today are reassessing their roles because of the SDGs and corporate sustainability.

Importance of accounting activates in SDGs achievement is recognized by professional international organizations. Among them are International Federation of Accountants (IFAC), the Association of Chartered Certified Accountants (ACCA), the Intergovernmental Working Group of Experts on International Standards of Accounting and Reporting Council (ISAR), Fauna & Flora International, the World Business Forum on Sustainable Development, KPMG, PwC and others.

The aim of this paper is to define the role of accounting in SDGs achievement and to promote the general idea of sustainable development. To do this authors integrate different approaches to structuring the role of professional accountants in Sustainable Development. Among them are types of roles that perform accountants, their professional functions, skills and competencies in the corporate environment. As the result a holistic vision of the role of accounting in sustainable development in the new economic conditions is provided.

Another contribution of this paper is a panoramic vision of the accounting profession transformation according to corporate sustainable development. Also further development of information and analytical support of sustainable development is required. To do this professional competence of accountants will be discussed.

The remainder of the paper is organized as follows: section 2 briefly reviews the academic literature about the role of accounting in the sustainable development. Section 3 contains analysis of existing approaches to differentiation of these roles. Section 3 presents concluding remarks.

1. LITERATURE REVIEW

The role of accountants in sustainable development and SDGs are actively discussed in academic literature.

Lovell and MacKenzie (2011) analyze the role of professional accountant organizations in management of the new carbon economy and climate changes.

Ngwakwe (2012) provides a critical review of sustainable development initiatives in the accounting profession and proves the need for more pragmatic approach to achieve accounting impact on sustainable development.

Milne and Gray (2013) offer a paradoxical idea that under isolation 'triple bottom line' concept and business participation in sustainable development accounting initiatives could lead to greater levels of un-sustainability.

Bebbington and Larrinaga (2014) outline the reasons for lack of progress in social and environmental accounting while achieving sustainable development and prospects of accounting and sustainability science merger.

O’Dwyer and Unerman (2016) show that society can get benefit from academic accounting researches.

Schaltegger et al. (2017) analyze the role of innovations in accounting during corporate sustainability promotion.

Lawrence, Botes, Collins and Roper (2013) and Khan and Gray (2016) provide an overview of the accounting, educational and business practices in the context of sustainable development based on the theory of autopoiesis as a metaphorical lens.

Gray and Collison (2002) explore the role of accountants and their education in the UK in the sustainable development context.

Ng, Leung and Lo (2016) prove the importance of attraction of sustainability competence for the new generations of accountants.

According to ACCA research (poll of over 4,500 ACCA students from 126 countries) 81% of respondents see the direct link between business and the depletion of natural resources (ACCA, 2014).

However, it should be mentioned that academic literature about the role of accountants in achieving sustainable development in general are critical and mostly discusses challenges and issues facing the accounting in the process of moving towards sustainable development. We believe these searches should be supplemented with research materials prepared by professional accounting organizations and developers of accounting and reporting standards, including IFAC, ACCA etc. The study of these organizations, as opposed to academic papers, creates a holistic vision of the role of the accounting profession in achieving SDGs in different sections.

2. APPROACHES TO DETERMINING ACCOUNTANCY CONTRIBUTION TO SUSTAINABLE DEVELOPMENT

2.1. Relevant SDG aspect & accountancy contribution

According to IFAC (2016) 8 from 17 SDGs and their 17 targets have direct relation to the accounting. Accountants can influence their achievement (see Table 1) and at the same time transforming accounting according to the new challenges from corporate sustainable development.

The most relevant goals for the accountants are the following: 12.6, 8.3, 17.16 and 17.18. Goal 12 and its target 12.6 act as a basis for the corporate sustainable development. They related to incorporation of the sustainable development criterions into the mission, strategy, tactical decisions and operating policies of business. As the result demand for more transparent and quality sustainability reporting (SR) is growing.

Goal 8.3 provides guidelines for the development of the accounting profession which consolidate efforts and harmonize approaches to standardization of SR.

Multi-stakeholder approach is formed within Goal 17.16. According to this goal improved data collection, monitoring and accountability are key elements of the information and analytical support of sustainable development.
Table 1. Mapping the SDG’s Goals interconnection in the light of accountancy contribution

<thead>
<tr>
<th>Goal</th>
<th>Targets</th>
<th>Key accountants’ contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>4: Quality Education</td>
<td>3, 6</td>
<td>Undertake initiatives to boost the profession’s talent pool; Identify innovative ways to contribute to societal goals, such as increasing financial literacy; Consider how to address inequality in the rates of men and women entering the profession</td>
</tr>
<tr>
<td>5: Gender Equality</td>
<td>5</td>
<td>Champion diversity, especially in gender; Create partnerships and support initiatives to increase the number of women in accountancy and finance, as well as in broader finance and business leadership roles.</td>
</tr>
<tr>
<td>8: Decent Work and Economic Growth</td>
<td>1, 3</td>
<td>Enhance awareness among accountants of the SDGs and the opportunities they create, and help foster the significant contribution of the profession to economic growth; Identify and evaluate opportunities for investment in new technology and infrastructure to enhance the sustainability of organizations</td>
</tr>
<tr>
<td>9: Industry, Innovation, Infrastructure</td>
<td>4, 5a</td>
<td>Facilitate the profession’s contribution to integrated reporting to rebalance economic and capital market decision making in favor of long-term value creation; Further develop support services that help accountants play a role in embedding sustainable development into strategy and operations</td>
</tr>
<tr>
<td>12: Responsible Consumption and Production</td>
<td>6</td>
<td>Provide visible and practical leadership to help drive greater insights and transparency that can lead to a more enlightened and inclusive capital markets system through decisions based on a longer-term perspective; Help companies, especially large and transnational companies, adopt sustainable business practices through integrating sustainability information into their governance, management, and reporting</td>
</tr>
<tr>
<td>13: Climate Action</td>
<td>1-3</td>
<td>Support market-based policy initiatives, such as carbon pricing, as a key policy lever to encourage necessary efficiency gains and investment in new technology; Encourage and support consistency, accessibility, and usefulness of climate-related disclosure and reporting; Keep accountants informed of how they can support their organizations’ efforts to lower carbon emissions and adapt to climate change</td>
</tr>
<tr>
<td>16: Peace, Justice Strong Institutions</td>
<td>5, 6</td>
<td>Advocate for good governance focused on smart regulation, rule of law, and well-functioning national institutions; Enhance the capacity of accountants to monitor and control fraud, corruption, and money laundering; Promote the importance of external public sector auditing in monitoring and reporting on national efforts to implement the SDGs</td>
</tr>
<tr>
<td>17: Partnerships for the Goals</td>
<td>9, 13, 14, 16, 19</td>
<td>Collectively consider where the profession can contribute, especially in terms of where its perspective and influence would be valued, and which partnerships and collaborations would enhance its contributions</td>
</tr>
</tbody>
</table>

2.2. Business perspectives gradations, accountants’ responsibilities and sustainable decisions

IFAC (2011) Sustainability Framework 2.0 identifies the importance of accounting contribution to sustainable development by the following three gradations (prospects) of corporate sustainability – strategic, operational and reporting (Table 2). However, it should be noted that to create long-term value of the company it is necessary to integrate all types of capital requires, as well as integrated decision making process and integrated internal and external information. Materiality, relevancy, accuracy, comparability and completeness of this information should be confirmed by independent auditors.

Incorporation of sustainable development criteria at all levels of decision-making process (strategic, tactical and operational) and business activities (management, current planning, budgeting and evaluation), effective communication with stakeholders based on SR are crucial tasks for accountants.
2.3. Types of accountant roles, job functions, competencies and corporate sustainability

Sustainable development transforms the role of professional accountants during the entire accounting cycle. The cycle is finished with the SR. SR requires identification of key stakeholder groups and their information needs; thorough knowledge and use of reporting standards; planning, execution and control of reporting process; management, monitoring, improvement of financial and non-financial reporting information systems; expansion of reporting indicators among environmental, social and managerial; use of new technologies, such as eXtensible Business Reporting Language, real-time reporting, integrated reporting (IFAC (2012)).

To achieve their tasks professional accountants have to improve their knowledge, skills and competencies.

International Education Standards for Professional Accountants 3 “Professional skills and general education” defines a list of skills and competencies that should possess professional accountants. It includes intellectual abilities, technical and functional skills, personal qualities, communication skills, organizational and managerial competence.

Implementation of SR and effective reporting increase the value of such skills of professional accountants as professionalism and ethical behavior according to the Code of Ethics for Professional Accountants, free and objective application of professional judgment, extensive knowledge of business technology, human resources, management and evaluation of non-financial activities, including environmental and social, focusing on stakeholders requests for information, the ability to work in conditions of changeable, uncertain and complex business environment (IFAC (2011)).

In this case the roles of Professional Accountants in SR are as follows:

- creators of value – professional accountants play the leading role in the development and implementation of strategies, policies, plans, structure and activities of the management and set a course to create sustainable development values;
- providers of value – professional accountants use information and provide management with high-quality reporting horizons which is the basis of the sustainable development strategy;
- keepers of the value – professional accountants protect natural, social, industrial and financial capital of the company;
- reporters of values – professional accountants ensure high-quality reporting for stakeholders.
Table 3. Key roles of professional accountants in sustainable business (IFAC (2011), IFAC (2015))

<table>
<thead>
<tr>
<th>Role of Professional Accountants</th>
<th>Description</th>
<th>Job Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Creators of value</td>
<td>Taking leadership roles in the design and implementation of strategies, policies, plans, structures, and governance measures that set the course for delivering sustainable value creation</td>
<td>Leadership/management: chief executive officer (CEO); chief financial officer (CFO)/financial director (FD); chief operating officer; director of governance or operations; treasurer</td>
</tr>
<tr>
<td>Providers of value</td>
<td>Informing and guiding managerial and operational decision making and implementation of strategy for achieving sustainable value creation, and the planning, monitoring, and improvement of supporting processes</td>
<td>Operational: business unit controller; financial, or performance analyst; cost accountant; resources manager; business support manager; systems analyst</td>
</tr>
<tr>
<td>Keepers of value</td>
<td>Ensuring the protection of a sustainable value creation strategy, against strategic, operational, and financial risks, and ensuring compliance with regulations, standards, and good practices</td>
<td>Management control: business assurance manager; risk manager; compliance manager; internal auditor</td>
</tr>
<tr>
<td>Reporters of value</td>
<td>Enabling the transparent communication of the delivery of sustainable value to stakeholders</td>
<td>Accounting and stakeholder communications: group controller; head of reporting; investor relations manager; financial or management accountant</td>
</tr>
</tbody>
</table>

This vision of professional accountant’s functional roles and their positions clearly correlates with gradations of corporate sustainable development. At the strategic level accountants exercise their authority as creators of values, at the operating level they act providers of sustainable development values and at the reporting level they act as keepers and reporters.

SR is the point of contact between SDGs and corporate sustainability. IFAC (2013) defined principles of reporting process. Among them are: obligations to prepare high-quality reporting, delineation of roles and responsibilities, planning and controlling the reporting process, involving stakeholders, determining the content of reporting standards for the preparation of financial and non-financial information, formalization of reporting process, analysis, interpretation, verification (audit) reporting indicators, evaluation and improvement of the reporting process.

2.4. Types of accountants profession groups & sustainable development

Accounting community can be divided into 5 groups: developers of standards, professional bodies, professional firms, qualified accountants and members of the academic community. ACCA, FFI and KPMG (2015) focus on changes in the traditional roles of these groups in the context of sustainable development (Table 4).

Detailed analysis of the roles of these groups allowed outlining challenges for them while achieving sustainable development goals. Despite the existence of 41 IAS and 16 International Financial Reporting Standards (The International Accounting Standards Board (IASB)), as well as 80 specific industry voluntary standards (The Sustainability Accounting Standards Board (SASB)), there is a gap between the traditional accounting and reporting and sustainable development and SR. The key task for accounting standards developers in terms of sustainable development is harmonization of information disclosure for all types of capital used by the companies.

For 175 existing professional bodies representing accountants worldwide, the most urgent tasks in the light of sustainable development initiatives are development of such approaches to education, training, certification and improvement of professional competence of accountants that meet the interdisciplinary nature of sustainable development as a concept.

For 2.5 million professional accountants whose interests are united by IFAC, the key challenge is to introduce the practice of evaluation, mea-
surement and disclosure of sustainable development indicators into their daily practice, thus incorporating SDGs in the corporate environment. Academicians in the field of accounting must act as unifying link between these groups, creating a scientific product which will act as a basis for the development of applied accounting methods and SR.

Table 4. Accountancy profession group role in traditional and sustainable business

<table>
<thead>
<tr>
<th>Accounting profession</th>
<th>Traditional role</th>
<th>Role in sustainability</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard setter IASB, SASB</td>
<td>Setting the rules and guidance that professional accountants follow when preparing financial statements</td>
<td>Creating a framework for reporting sector-specific information; Filling information gaps; Borrowing from financial accounting practice and expertise; Providing relevant, integrated data</td>
</tr>
<tr>
<td>Professional body IFAC, ACCA, Institute of Chartered Accountants in England &amp; Wales (ICAEW); Chartered Institute of Management Accountants (CIMA) along with other national representatives</td>
<td>Promoting the role of professional accountants in modern economies, providing a route for trainees to gain professional accountancy qualifications; Representing the interests of qualified accountant members; Performing some regulatory and disciplinary activities; Supporting standard-setting activities, eg through commenting on proposal; Sponsoring and originating research into business and accounting issues; Generally acting in the public interest (eg commenting on proposed legislation and tax rules).</td>
<td>Supporting a number of the current global initiatives, providing facilities and expertise as appropriate; Support for the development of thinking about sustainability issues; Trying to raise awareness of sustainability issues among members, and business leaders more widely; Through the publication of articles in member magazines and journals; Educational role</td>
</tr>
<tr>
<td>Professional firm (Big Four firms Other accountancy firm networks)</td>
<td>Providing regulated services such as the audit of financial statements; Providing tax advice and compliance services to clients; Offering additional advisory and assurance services in relation to mergers and acquisitions, fund raising, risk management, finance operations, business processes, etc; Participating in research and thought leadership on emerging accounting and business issues; Supporting professional bodies and standard setters; Training professional accountants</td>
<td>Developing their own methodologies and tools to help businesses understand their sustainability risks and opportunities; Providing support to major initiatives focusing on developing thinking and practice on SD</td>
</tr>
<tr>
<td>Qualified accountant</td>
<td>Working in professional firms to provide audit and advisory services to clients; Working in business, preparing management accounts for internal control and decision making or preparing financial statements for external reporting, e.g. to investors Working in the finance teams of public sector or non-profit organizations performing many other roles (e.g. as independent consultants, academics, writers); Participating in the development of accounting and tax rules, etc. through membership of committees or by responding to consultations</td>
<td>Helping to develop thinking about sustainability and to raise awareness of its importance for business success; Creating an agreed framework for companies to report on sustainability; Prioritizing business needs changing business processes so that sustainability risks and opportunities are addressed as part of routine management operations; Reviewing environmental or sustainability disclosures to see if they are fair, balanced and understandable; Identify risks and opportunities associated with natural capital</td>
</tr>
<tr>
<td>Academic</td>
<td>Conducting research into current issues in accountancy, providing degree courses for university students, participating in standard setting, sharing insights with professional accountancy bodies and other associations through membership of working groups, expert groups and forums</td>
<td>Develop relationships with all parties involved in the SD -- international initiatives, accountancy bodies, accountancy firms working in the area and businesses and financial institutions, to help them understand sustainability risks; exploring differing approaches to value</td>
</tr>
</tbody>
</table>
CONCLUSIONS

Nowadays there are 17 sustainable development goals (SDGs) and 169 indicators that act as global guidelines for sustainable development. They help corporate sector in restructuring their business processes according to the challenges of our time. Integration of SDGs and corporate sustainable development strategies needs reformating of existing information and analytical provision of decision making process on the basis of social, economic and environmental dimensions of sustainable development.

In this context, professional accountants are directly related to the promotion of sustainable development initiatives at the corporate level.

Using materials of professional organizations authors synthesize different approaches to structuring the role of professional accountants, providing a holistic vision of the accounting profession in the new economy.

Authors investigate the contribution of professional accountants in achieving SDGs, the most relevant among them are goals 12.6, 08.03, 17.16 and 17.18.

Using the following corporate sustainable development gradation: strategic, operational and reporting, we determine typical roles and areas of professional accountant’s responsibility in decision-making support.

Functional roles of professional accountants and their positions clearly correlate with gradations of corporate sustainable development. At the strategic level accountants exercise their authority as creators of values, at the operating level they act as providers of sustainable development values and at the reporting level they act as keepers and reporters. Thus the role of professional accountants in sustainable development needs to be revised according to new economic conditions.

At the same time, mechanisms of professional competence for accountants require further investigation, because different groups of accountants are responsible for the high-quality and reliable sustainable reporting which is the basis of information and analytical support of sustainable development.
